**Etanercept** - for control of active joint inflammation

**AREAS OF RESPONSIBILITY FOR THE SHARING OF CARE**

This shared care agreement outlines suggested ways in which the responsibilities for managing the prescribing of Etanercept can be shared between the specialist and general practitioner or non-medical prescriber in primary care (GP). GPs are invited to participate. If the GP is not confident to undertake these roles, then he or she is under no obligation to do so. In that case, the total clinical responsibility for the patient for the diagnosed condition remains with the specialist. **If a specialist asks the GP to prescribe drugs for this treatment, the GP should reply to this request as soon as practicable.**

Sharing of care assumes communication between the specialist, GP and patient. The intention to share care should be explained to the patient by the doctor initiating treatment. It is important that patients are consulted about treatment and are in agreement with it. Patients with Rheumatological inflammatory diseases are under regular specialist follow-up. This provides an opportunity to discuss and to monitor drug therapy.

**The doctor who prescribes the medication legally assumes clinical responsibility for the drug and the consequences of its use.**

**RESPONSIBILITIES and ROLES**

**Specialist responsibilities**

- Initiate (and continue, if responding) treatment with Etanercept, which will be supplied by homecare provider.
- Discuss the benefits and side effects of treatment with the patient and inform GP this has occurred.
- Ask the GP whether he or she is willing to participate in shared care, and agree with the GP as to who will discuss the shared care arrangement with the patient.
- Review the patient’s condition and monitor response to treatment regularly where indicated.
- Advise GP if monitoring is needed, and the frequency.
- Monitor any other parameters considered necessary, or advise GP on which to monitor.
- Communicate promptly with the GP when treatment is changed or needs to be changed by the GP, any results of the monitoring undertaken, and assessment of adverse events.
- Have a mechanism in place to receive rapid referral of a patient from the GP in the event of deteriorating clinical condition.
- Advise GPs on when to stop treatment (if appropriate).
- Report adverse events to the MHRA via Yellow Card Scheme.
- Ensure that clear backup arrangements exist for GPs to obtain advice and support.
General Practitioner responsibilities

- Reply to the request for shared care as soon as practicable.
- Monitor any parameters considered necessary, if agreed with the specialist to do so.
- Report to and seek advice from the specialist on any aspect of patient care that is of concern and may affect treatment.
- Refer patient to specialist if his or her condition deteriorates.
- Stop treatment on the advice of the specialist or immediately if an urgent need to stop treatment arises.
- Report adverse events to the specialist and to the MHRA via the Yellow Card Scheme.

Patient’s role

1. Report to the specialist or GP if he or she does not have a clear understanding of the treatment.
3. Report any adverse effects to the specialist or GP.

SUPPORTING INFORMATION (taken from the SPC)

Licensed indications
Etanercept is currently licensed for the management of rheumatoid arthritis, psoriatic arthritis and Ankylosing Spondylitis and Juvenile Idiopathic Arthritis.

Dosage and Administration
Etanercept is available as a 25mg or 50mg pre-filled syringe and a 50mg pre-filled pen for subcutaneous injection (other formulations available for paediatric use).

Etanercept is administered by subcutaneous injection, either by the patient themselves or by a designated person (carer/relative).
Some patients will require practice or district nurse input for administration. **If this is not going to be possible please let the Rheumatology Department know as soon as possible.**

Contraindications and precautions for use
- The use of live vaccines with etanercept is contra-indicated.
- Patients taking Etanercept are more susceptible to serious infections (see below).
- Tuberculosis may be activated by etanercept. The patient will be appropriately screened by the rheumatologist as part of the initial decision-making process.
- Etanercept is contraindicated in moderate to severe heart failure (NYHA class III / IV)
- Etanercept must not be continued in patients who develop new or worsening symptoms of heart failure.
The use of Etanercept in pregnant women is not recommended, and women of child-bearing potential should be advised not to get pregnant during etanercept therapy. They should use effective contraception to prevent pregnancy during therapy and for at least 3 months after discontinuation of therapy. Women must not breast feed during Etanercept therapy or for at least 3 months after Etanercept therapy is discontinued.

It is also recommended that male partners receiving etanercept should use effective contraception for the time periods stated above.

Side Effects (also state any specific side-effects which require the consultant to be notified)

- Headache, cough, nasopharyngeal pain, rash, pruritis, lower respiratory infections, viral infections (influenza, herpes), candidiasis, bacterial infections (including urinary tract infections), upper respiratory infection, injection site reaction (including pain, swelling, redness or pruritis), hepatic enzymes increased, diarrhoea, abdominal pain, stomatitis and mouth ulceration, nausea.
- Rare: pulmonary oedema, pancreatitis, pneumonitis.
- Etanercept can cause leucopenia and neutropenia. Patients who develop a new infection while undergoing treatment with Etanercept should be monitored closely.
- Administration of Etanercept should be discontinued if a patient develops a serious infection i.e. one that requires antibiotic therapy. Antibiotic therapy, where indicated, must be commenced promptly and only once the course completed and the infection has resolved should therapy with Etanercept be re-commenced.

For a complete list of side effects see BNF/ Summary of product Characteristics.

Treatment should be withheld and the Rheumatology Department contacted if:

- NEUTROPHILS < 1.5 x10^9,
- PLATELETS < 100 x 10^9
- >2 fold increase in ALT (from upper limit of reference range)
- RASH, EXCESS BRUISING OR ORAL ULCERATION
- Sepsis
- New / increasing dyspnoea or cough

Monitoring (State specific monitoring to be undertaken by the GP / Consultant) ) see FRDU blood monitoring forms (ADTC website)

Rheumatologist responsibilities:
FBC, liver and renal function is within normal parameters to allow Etanercept to commence.
Pulmonary fibrosis and latent TB (or active TB) has been excluded.

General Practitioner responsibilities:
- While taking Etanercept patients require: fortnightly FBC for 3 months, monthly FBC for 6 months and 3 monthly FBC thereafter.
- Liver function monthly for 6 months, every 3 months thereafter.
- Renal function if normal should be checked every 6-12 months.

Consider pneumonitis in any patient on Etanercept who develops new or worsening dyspnoea.

Drug Interactions

- Avoid concomitant use of live vaccines.

For a complete list of drug interactions please see the BNF / Summary of Product Characteristics.

Cost (July 2012)

50mg prefilled syringe or pen = £178.75
The cost of Etanercept is met by the Rheumatology service. Etanercept is supplied directly to patients using a homecare provider, which is organised by the Rheumatology service.
